DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a power transmission having output shafts provided apart in a longitudinal direction of the vehicle body, classified in class 180, subclass 337.
- II. Claims 19 and 20, drawn to a transmission mechanism within an engine crankcase and a differential in a case separate but attached to the crankcase, classified in class 74, subclass 606R.

Inventions I and II are directed to related products. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, the case and crankcase structure of Invention II is not required to be provided solely for the longitudinally offset outputs of Invention I.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
